Education

• BSc (Hons) Computer Games Design and Programming

Staffordshire University

• A Levels — Mathematics, Further Mathematics, Computer Science

North Bristol Post 16

Skills

C# / Unity — Expert

Gameplay Systems — Expert

Netcode & Multiplayer — Expert

UI Toolkit — Advanced

Dynamic Camera & Audio — Advanced

XR / VR (XRI) — Advanced

State Machine AI — Advanced

Summary

Gameplay and systems developer focused on responsive multiplayer architecture, dynamic camera rigs, and polished player-facing UI. Experienced structuring server-authoritative netcode and iterative gameplay loops. Always refines mechanics and feel based on playtest and design feedback.

Work Experience

Tech Lead — Collaborative Game Project

University Collaboration

- Led technical direction for a large multi-disciplinary team; delegated work and kept the group aligned on milestones.
- Stayed in regular communication with other discipline leads to resolve blockers and scope gameplay systems.
- Built a shared system log so designers could check out Blueprint / UAsset work and avoid merge conflicts in version control.
- Iterated on gameplay design from playtest and lead feedback, tuning systems until they met the team vision.

Gameplay & Systems Developer — Knock Out

Staffordshire University

- Physics-based multiplayer hex brawler with tethered players; featured server-authoritative netcode and deep combat.
- Implemented dynamic camera tracking, adaptive audio fades, and UI Toolkit layouts for responsive in-game HUD.
- Delivered shrinking battle map logic, rogue-lite catch-up mechanics, and netcode-synchronized combat states.

Developer — 2D Platformer

Personal Project

- Coyote-time platforming, slow-motion energy resource, and decoupled ScriptableObject event channels for clean architecture.

Developer — Unity VR Framework

Personal Project

- Extended XR Interaction Toolkit with velocity-based combat, two-handed grip, tag sockets, and sensory shader effects.
